Kamala College, Kolhapur

(Autonomous)

English

M.A. (Part-I) (Semester-II)

Examination May, 2024.

NEP - 2020

CC – 6 - Sociolinguistics and Stylistics

Subject Code: 1009

Day and Date: Saturday, 11/05/2024

Total Marks: 80

Time: 11.00 a.m. to 2.00 p.m.

Instructions:

- 1. All questions are compulsory.**
- 2. Figures to the right indicate full marks.**

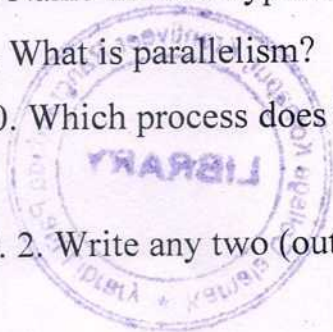

.....
Q. 1. Answer in one word/phrase/sentence.

[10]

1. What is speech community to Labov?
2. What is idiolect?
3. What is register?
4. What is creole?
5. What are the six primary domains distinguished by Biber?
6. Which are the two prominent linguistic notions of style?
7. What is deviation?
8. Name the four types of metaphors.
9. What is parallelism?
10. Which process does Shklovsky advocate to make things strange in poetry?

Q. 2. Write any two (out of three) in about 600 words each.

[30]

A. What is the difference between 'language' and 'dialect' from Hudson's point of view?

Or

B. Write a note on features of 'pidgins' and reasons of pidgin development .

Or

C. Discuss Code switching and Code mixing.

Q. 3. A. Register analysis of a passage. [15]

The most powerful atom resolving microscope in the U. K. has been unveiled at the University of Cambridge.

The new electron microscope, which will enable scientists to view individual atoms in any material was officially unveiled by the Minister for Universities and Science, David Willetts.

The unique machine, the FEI Titan 3 Electron Microscope, enables scientists to view and analyse structures at a resolution of 0.7 Angstrom – less than one-half the size of a carbon atom and over a million times smaller than the width of a human hair, a university release said.

The microscope's impressive power will facilitate pioneering research previously restricted by scientists' inability to view and analyse structures at such a small scale.

One of the research projects which will be using the new microscope is an investigation into diseases which can be characterized by the deposition of plaques, including Alzheimer's and Parkinson's.

These plaques consist of rods as strong as steel called 'nanowires'. As they are only a few nanometers in diameter, they are exceptionally difficult to study and are too small to be seen using MRI scans or X-rays.

B. Stylistic analysis of a poem. [15]

The Dead

These hearts were woven of human joys and cares,
Washed marvelously with sorrow, swift to mirth
The years had given them kindness. Dawn was theirs,
And sunset, and the colours of the earth.

These had seen movements, and heard music; known
Slumber and waking; loved; gone proudly friended;
Felt the quick stir of wonder; sat alone;
Touched furs and flowers and cheeks. All this is ended.
There are waters blown by changing winds to laughter
And lit by the rich skies, all day. And after,
Frost, with a gesture, says the waves that dance
And wandering loveliness. He leaves a white
Unbroken glory, a gathered radiance,
A width, a shining peace, under the night.

Rupert Brooke

Q. 4. Write short notes on any two (out of three) in about 200 words each.

[10]

1. Diglossa
2. Stylistics as an interdisciplinary subject.
3. Sociolects
